#### 1. INTRODUCTION

This document was previously Appendix B1, Annex C of S-57 Edition 3.1. It specifies the checks that, at a minimum, producers of IENC validation tools should include in their validation software. This software will be used by hydrographic offices to help ensure that their IENC data are compliant with the Inland ECDIS Standard, Section 2 Product Specification for Inland ENCs. The checklist has been compiled for the IHO from lists of checks provided by a number of hydrographic offices and software companies. The document will be maintained by means of new editions.

IENC validation software checks that the data are in conformance with the Inland ECDIS Standard IENC Product Specification. Any violations are categorised as either "errors" or "warnings". "Errors" are defined as more serious discrepancies or violations. For example, the data may not conform to one of the mandatory requirements of the IENC Product Specification. "Warnings" identify less serious violations or suspicious data. An example would be the apparent location of a building in the sea. The various checks in this document have been categorised with these definitions in mind.

In order to assist software developers, those checks that have been removed from all previous editions of S58 have been retained in Edition 4.2 as struck out text strings.

Note: Within this document the word "overlap" is used. In the context of this document, this means:

- for two objects of type Area, that their geometric primitives have a certain area in common (there is no overlap when they touch at a point or along an edge),
- for an object of type Line and an object of type Area, that the line object has a part of one of its edges lying within the geometric primitive of the area object (there is no overlap when they touch at a point or along an edge).

#### LIST OF INLAND ENC VALIDATION CHECKS

### 2.1 Checks relating to S-57 and Inland ENC Data Structure

No	Check	Conformity to:	Cat
	DATA STRUCTURE		
1	Check that no part of an edge is duplicated (i.e. a pair of coordinates identical for two edges).	Part 2 (2.2.1.2)	W
2	Check that all VE edges have a beginning node and an end node.	Part 2 (2.2.1.2)	E
3	Check that the record identifier NAME is unique within the file.	Part 3 (2.2)	E
4	Check that Record Name RCNM contains only the values in table 2.2.	Part 3 (2.2.1)	E
5	Check that the Record Identification Number RCID is in the range 1 to 2 <sup>32</sup> -2.	Part 3 (2.2.2)	E
6	Check the CRC of every file	Part 3 (3.4)	E
7	Check that all objects have legal AGEN, FIDN and FIDS subfield values.	Part 3 (4.3.1) and (4.3.2)	E
8	Check that an attribute code does not repeat for a single object.	Part 3 (4.4), (4.5) and (5.1.2)	E
9	For line objects, check that ORNT = 1 [forward] or 2 [reverse], USAG = 255 [null], and MASK = 1 [mask], 2 [show] or 255 [masking is not relevant].	Part 3 (4.7.2) and Appendix B.1 (3.8)	E
10	For point objects, check that ORNT = 255 [direction is not relevant], USAG = 255 [null], and MASK = 255 [masking is not relevant].	Part 3 (4.7.1)	E
11	Check that all segments with USAG = 3 [exterior boundary truncated by the data limit] are linked to an object M_COVR.	Part 3 (4.7.3.3)	E
12	Check that all feature objects except C_(collection) have a FSPT.	Part 3 (4.7)	E
13	Check that for linear features comprising multiple edges, the vector records making up the linear feature are referenced sequentially and that the end node of a vector record is the same as the start node of the following vector record.	Part 3 (4.7.2)	W
14	Check for any area object having outer and inner boundaries that two of these boundaries do not share more than one node.	Part 3 (4.7.3)	E
15	Check that the first and last edges bounding an area meet at a common connected node.	Part 3 (4.7.3.1)	E
16	Check that area outer boundaries are encoded clockwise.	Part 3 (4.7.3.2)	E
17	Check that area inner boundaries are encoded counter clockwise.	Part 3 (4.7.3.2)	E
18	<ul> <li>Check that all areas are defined by:</li> <li>Only one outer boundary (referenced first),</li> <li>Optional zero or more inner boundaries which are closed, sequential and with proper use of USAG.</li> </ul>	Part 3 (4.7.3.2) and (4.7.3.3)	E
19	Check that all spatial edges which coincide with data limit borders (i.e. limits of M_COVR with CATCOV = 1 [coverage available]) are using USAG = 3 [Exterior boundary truncated by the data limit]	Part 3 (4.7.3.3)	W
20	Check that geometry primitive is compatible with object	Product Specification for	Е

	class.	Inland ENCs, Part 3 (5.1.1) and Supplement No2 Ch.4 (3.3.1)	
21	Check that all vector record pointer (VRPT) fields are pointed to by an edge vector record.	Part 3 (5.1.3)	E
22	Check for correct sequence of begin/end nodes for edges.	Part 3 (5.1.3.2)	E
23	Check that only SG2D and SG3D coordinates are used in files.	Part 3 (5.1.4)	E
24	Check that soundings are coordinate type SG3D with X, Y and Z values.	Part 3 (5.1.4.1)	E
25	Check that the beginning and end of an edge are	Part 3 (5.1.4.4)	E
	<ul> <li>explicitly encoded as connected nodes.</li> <li>Check that the geometry of the connected node is not part of an edge.</li> <li>Check that edges directly reference their begin/end</li> </ul>	,	
	nodes using the vector record pointer.		
26	Check that values in subfields are within the allowable range where applicable:  Subfield value ranges according to S-57 format description.	Part 3 (7.2.2.1), (7.3) and Inland ENC Feature Catalogue.	Е
	<ul> <li>Legal ranges for attribute values (for attribute values of type "float", the resolution given in the format statement by the integer part (e.g. <u>XX</u>.X) must not be checked).</li> <li>(see check 91)</li> </ul>		
27	Check all formatted subfields in S-57.	Part 3 (7.2.2.2)	Е
28	Check that the count of records in DSSI is correct.	Part 3 (7.3.1.2)	E
29	Check for valid index position for updating in FFPC-NFPT, FSPC-NSPT, SGCC-CCNC, and VRPC-NVPT.	Part 3 (7.6.5) (7.6.7), (7.7.1.5) and (7.7.1.3)	E
30	Check for valid index position for updating in FFPC-FFIX, FSPC-FSIX, SGCC-CCIX, and VRPC-VPIX.	Part 3 (7.7.1.5), (7.6.5), (7.6.7) and (7.7.1.3)	E
31	For all edges, check that all SG2D coordinates are different from the start and end node coordinates.	Part 3 (7.7.1.6)	E
32	Check that record updates refer to a valid record NAME.	Part 3 (8.3.2)	Е
33	Check that any attribute update refers to a valid record NAME and attribute label.	Part 3 (8.3.3)	E
34	Check that pointer index updating refers to a valid record NAME and index within pointer fields FFPT, FSPT and VRPT.	Part 3 (8.3.4)	E
35	Check if record version RVER is out of sequence for objects.	Part 3 (8.4.2.1) and (8.4.3.1)	Е
36	For record updates for feature/vector updates, check that if it is  DELETE: the record does not contain further fields,	Part 3 (8.4.2.2) and (8.4.3.1)	E
	<ul> <li>MODIFY/INSERT: the record contains more information about the update.</li> </ul>		
37	Check that update and base data have the same lexical level.	Part 3 (8.4.2.2a)	E
38	Check that an update record only contains one FFPC field [8.4.2.3], and one VRPC field [8.4.3.2b], and one FSPC field [8.4.2.4], and one SGCC field [8.4.3.3].	See references in the column to the left.	E
39	Check for connectivity of line segments in an edge after	Part 3 (8.4.3.3)	E

	updating.		
40	<ul> <li>Check that any two feature objects of type Line satisfying all of the following conditions are chained together:</li> <li>both objects are encoded with the same class and attribute values,</li> <li>both objects refer to linear features for which all referenced edges are encoded with the same spatial attribute values,</li> <li>linear features of both objects have one (or two) common connected node(s) which is (are) a beginning node or an end node of each linear feature,</li> <li>each common connected node is not shared by more than two objects satisfying the three above conditions.</li> </ul>	Logical consistency	W
41	Check that all areas are closed.	Logical consistency	Е
42	Check that VE edges linked to Group 1 objects appear twice with different ORNT values, or are linked to objects M_COVR with CATCOV = 1 [coverage available].	Logical consistency	Ē
43	Charle that all values (average that a latter and the second	Legisel sensiety :	14/
44	Check that all values (except the shallowest and deepest) DRVAL1 and DRVAL2 of DEPARE and depare of type area are also values of VALDCO.	Logical consistency EG 1.3.1 – I11-e, I11-f, I12-g, I12-h	W
45	Check that no edge is shared by two or more line objects of the same object class, except for objects from the following list which may share geometry if they are populated with different attribute values: berths, cblohd, CBLSUB, CONVYR, convyr, FERYRT, feryrt, MORFAC, NAVLNE, PIPSOL, RECTRC.	Logical consistency	W
46	Check for any object having both attributes DATEND and DATSTA encoded with explicit values that DATEND is the same or later than DATSTA.	Logical consistency	E
47	Check for any LIGHTS object having SECTR1 encoded that SECTR2 is also encoded (with a different value) and vice versa.	Logical consistency	E
48	Check for any M_SREL object having SCVAL1 and SCVAL2 encoded that the value of SCVAL1 has been set to a larger scale than SCVAL2 (i.e. attribute value for SCVAL1 is smaller than attribute value for SCVAL2).	Logical consistency	E
49	Check for any object having DRVAL1 and DRVAL2 encoded that DRVAL1 is smaller than or equal to DRVAL2.	Logical consistency	E
50	Check that all the nodes that compose the geometry of any RECTRC with CATTRK=1 [based on a system of fixed marks] or NAVLNE are on a straight line.	Logical consistency	W
51	Check that no edge is shared by a COALNE object and a SLCONS/slcons object of type line or by a COALNE object and a SLCONS/slcons object of the type area covered by a LNDARE and having WATLEV/watlev undefined or encoded with the values (2) [always dry] or (1) [partly submerged at high water]	Logical consistency	W
52 53	Check that any SLOGRD object is covered by a LNDARE object of type Area. Check that any SLOTOP object is covered by a LNDARE object of type Area or is on its border.	Appendix B1, Annex A (4.7.4, 4.7.5, 4.8.4)	E

54	Check for any CRANES, cranes, BUISGL, LNDMRK or SILTNK object, and for any DAYMAR object which is not a slave in a master/slave relationship or part of an overlay cell:  • if it is of type Area, that it is covered by a LNDARE, bridge, FLODOC, flodoc, PONTON or ponton object of type Area,  • if it is of type Point, that:  - it is situated within a LNDARE, bridge, FLODOC, flodoc, PONTON or ponton object of type Area, or  - it is coincident with one LNDARE, PILPNT, PYLONS, SLCONS, UWTROC or uwtroc object of type Point, or  - it is situated on a COALNE, DAMCON, LNDARE, SLCONS or slcons object of type Line.	Logical consistency	W
55	Check that no line or point LNDARE object is situated within a LNDARE object of type Area, except for cases where it is covered by a LAKARE, RIVERS, lokbsn or CANALS object.	Logical consistency	W
56	Check that any BUAARE object is covered by a LNDARE object of type Area or is coincident with a LNDARE of type point.	Logical consistency	W
57	Check for any COALNE object which does not share spatial geometry with a LNDARE or SLCONS object that it is not situated within a LNDARE object of type Area, or that it does not have a LNDARE object of type Area on both sides.	Logical consistency	W

58			
59	Check that no OBSTRN object of type Line bounds an	Logical consistency	W
	OBSTRN object of type Area.		
60	Check that no CBLSUB object is situated within a	Logical consistency	W
	LNDARE object of type Area.		
61	Check for any object with WATLEV = 3 [always under	Logical consistency	W
	water/submerged]:		
	if it is of type Line or Area, that:		
	<ul> <li>it is not within or overlaps an intertidal area</li> </ul>		
	(DEPARE with DRVAL2 $\leq$ 0), or		
	<ul> <li>it is not within or overlaps a LNDARE object of</li> </ul>		
	type Area,		
	if it is of type Point, that:		
	<ul> <li>it is not within an intertidal area, or</li> </ul>		
	<ul> <li>it is not within a LNDARE object of type Area, or</li> </ul>		
	<ul> <li>it is not coincident with a LNDARE object of type</li> </ul>		
	point, or		
	<ul> <li>it is not situated on a LNDARE object of type line.</li> </ul>		
62	Check for all PONTON, ponton, HULKES, hulkes, flodoc	Logical consistency	W
	or FLODOC objects of type Area that no edge of their		
	limits shares the geometry of a line COALNE, slcons or		
	SLCONS object, except when this edge also shares the		
	geometry of a LNDARE object of type Area.		
63	Check that no RECTRC object overlaps or intersects a	Logical consistency	E
	linear or area object LNDARE, PONTON, ponton,		
	HULKES, hulkes, FLODOC, flodoc or other objects		
	having WATLEV/watlev = 1 [partly submerged at high		

Check that no point or area achare object is situated within or overlaps another object with attribute RESTRN or restrict containing value 1 [anchoring prohibited].		waterlar 2 [always dry]		
within or overlaps another object with attribute RESTRN or restruct containing value 1 [anchoring prohibited].  65 Check that LIGHTS objects in the same spatial position whose sectors overlap each other have at least one of the values encoded differently for these attributes: CATLIT, EXCLIT, LITCHIR, SIGPER or SIGGRP. Remark: This check must not be applied to LIGHTS objects with STATUS 4 [not in use]  66 Check for any SOUNDE having the value (1) or nothing for EXPSOU that any depth value is situated within a DEPARE or a DRGARE of the corresponding range. See new checks 1768 and 1769  67 Check that no object is duplicated (same class, same attribute description and same geometry).  68 Check if there is an update to an object without the corresponding text/graphic file.  69 Check that no object of type Area (except for objects where all of the edges have USAG = 3) has all of its edges masked (i.e. USAG = 3 [acterior boundary truncated by the data limit) or MASK = 1 [mask]).  60 Check that no object of type Line has any of it's edges masked (i.e. MASK = 1 [mask]).  61 Check that no loop exists in the graph of hierarchical relationships (e.g., no master object is slave of its own slave,).  72 Check that no attribute value contains a leading or a trailing space and no attribute of type List contains any space.  73 Check for any floating DEPCNT object (i.e. which does not share any edge with a Group 1 object) which is within an area DEPARE object, that DRVAL2-VALDCO >DRVAL1 Remark: This check must only be applied if both DRVAL1 and DRVAL2 for the DEPARE object are encoded with a Group 1 object) which is within an area DRGARE object, that DRVAL2-VALDCO >DRVAL1 for the DRGARE object, that VALDCO > DRVAL1 for the DRGARE object, that TORVAL2 or Object (i.e. which does not share any edge with a Group 1 object) (which is within an area DRGARE object, that DRVAL2 or object of type Area.  74 Check for any floating DEPCNT object or such does not share any edge with a Group 1 object) which is within an area DRGARE object,	64	water] or 2 [always dry].	Logical consistency	۱۸/
or restm containing value 1 [anchoring prohibited].  65 Check that LIGHTS objects in the same spatial position whose sectors overlap each other have at least one of the values encoded differently for these attributes: CATLIT, EXCLIT, LITCHIR, SIGPER or SIGGRP. Remark: This check must not be applied to LIGHTS objects with STATUS 4 [not in use]  66 Check-for-any-SOUNDG-having-the-value-(1)-or-nothing for-EXPSOU that any depth value is situated within a DEPARE or a DRGARE of the corresponding range. See new checks 1768 and 1769  67 Check that no object is duplicated (same class, same attribute description and same geometry).  68 Check (fi there is an update to an object without the corresponding text/graphic file.  69 Check that the Agency-Code of feature-objects is valid.  70 Check that no object of type Area (except for objects where all of the edges have USAG = 3) has all of its edges masked (i.e. USAG = 3 (saterior boundary truncated by the data limit] or MASK = 1 [mask]).  Check that no object of type Line has any of its edges masked (i.e. MASK = 1 [mask]).  Check that no object of type Line has any of its edges masked (i.e. MASK = 1 [mask]).  Check that no attribute value contains a leading or a trailing space and no attribute value contains a leading or a trailing space and no attribute value contains a leading or a trailing space and no attribute value contains a leading or a trailing space and no attribute value contains a leading or a trailing space and no attribute value contains a leading or a trailing space and no attribute value contains a leading or a trailing space and no attribute value contains a leading or a trailing space and no attribute value contains a leading or a trailing space and no attribute value contains a leading or a trailing space and no attribute value contains a leading or a trailing space and no attribute value contains a leading or a trailing space and no attribute value contains a leading or a trailing space and no attribute value contains any space.  75 Check for any floating	04		Logical consistency	VV
Check that LIGHTS objects in the same spatial position whose sectors overlap each other have at least one of the values encoded differently for these attributes: CATLIT, EXCLIT, LITCHR, SIGPER or SIGGRP. Remark: This check must not be applied to LIGHTS objects with STATUS 4 [not in use]  66 Check for any SOUNDE having he value (1) or nothing for EXPSOU that any depth value is situated within a DEPARE or a DRGARE of the corresponding range. See new checks 1768 and 1769  67 Check that no object is duplicated (same class, same attribute description and same geometry).  68 Check if there is an update to an object without the corresponding text/graphic file.  69 Check that the Agency Code of feature objects is valid. Appendix A, Annex A  70  71 Check that no object of type Area (except for objects where all of the edges have USAG = 3) has all of its edges masked (i.e. USAG = 3 [exterior boundary truncated by the data limit] or MASK = 1 [mask]). Check that no object of type Line has any of it's edges masked (i.e. MASK = 1 [mask]). Check that no object of type Line has any of it's edges masked (i.e. MASK = 1 [mask]).  72 Check that no lope wists in the graph of hierarchical relationships (e.g. no master object is slave of its own slave,).  73 Check that no attribute value contains a leading or a trailing space and no attribute of type List contains any space.  74 Check for any floating DEPCNT object (i.e. which does not share any edge with a Group 1 object) which is within an area DEPARE object, that VALDCO > DRVAL1 Remark: This check must only be applied if both DRVAL1 for the DEPARE object that VALDCO > DRVAL1 remark: This check must only be applied if both DRVAL1 for the DEPARE object that VALDCO > DRVAL1 remark: This check must only be applied if DRVAL1 for the DRGARE object, that VALDCO > DRVAL1 remark: This check must only be applied if DRVAL1 for the DRGARE object is encoded with an explicit value.  75 Check for any grae object that vALDCO > DRVAL1 remark: This check must only be applied if DRVAL1 for the D				
whose sectors overlap each other have at least one of the values encoded differently for these attributes: CATLIT, EXCLIT, LITCHR, SIGPER or SIGGRP. Remark: This check must not be applied to LIGHTS objects with STATUS 4 [not in use]  66 Check for any SQUINDG having the value (1) or nothing for EXPSOU that any depth value is eliutated within a DEPARE or a DRGARE of the corresponding range. See now checks 1768 and 1769  67 Check that no object is duplicated (same class, same attribute description and same geometry).  68 Check that no object is duplicated (same class, same attribute description and same geometry).  69 Check that the Agency Code of feature objects is valid.  70 Check that no object of type Area (except for objects where all of the edges have USAG = 3) has all of its edges masked (i.e. USAG = 3 [exterior boundary truncated by the data limit) or MASK = 1 [mask]).  Check that no object of type Line has any of it's edges masked (i.e. USAG = 3 [exterior boundary truncated by the data limit) or MASK = 1 [mask]).  Check that no loop exists in the graph of hierarchical relationships (e.g. no master object is slave of its own slave,).  71 Check that no attribute value contains a leading or a trailing space and no attribute of type List contains any space.  72 Check for any floating DEPCNT object (i.e. which does not share any edge with a Group 1 object) which is within an area DEPARE object, that VALDCO > DRVAL1. Remark: This check must only be applied if both DRVAL1 and DRVAL2 for the DEPARE object, that VALDCO > DRVAL1. Remark: This check must only be applied if DRVAL1 for the DRGARE object, that VALDCO > DRVAL1. Remark: This check must only be applied if DRVAL1 for the DRGARE object, that VALDCO > DRVAL1. Remark: This check must only be applied if DRVAL1 for the DRGARE object is an edded with an explicit value.  74 Check that no DEPCNT object (i.e. which does not share any edge with a Group 1 object) which is within an area DRGARE object that VALDCO > DRVAL1. Remark: This check of any grade object th	65		Logical consistency	W
the values encoded differently for these attributes: CATLIT, EXCLIT, LITCHR, SIGPER or SIGGRP. Remark: This check must not be applied to LIGHTS objects with STATUS 4 [not in use]  66 Check for any SOUNDG having the value (1) or nothing for EXPSOU that any depth value is situated within a DEPARE or a DRGARE of the corresponding range. See new checks 1768 and 1769  67 Check that no object is duplicated (same class, same attribute description and same geometry).  68 Check if there is an update to an object without the corresponding text/graphic file.  69 Check that no object of type Area (except for objects where all of the edges have USAG = 3) has all of its edges masked (i.e. USAG = 3 [exterior boundary truncated by the data limit] or MASK = 1 [mask]). Check that no object of type Line has any of its edges masked (i.e. MASK = 1 [mask]).  72 Check that no object of type Line has any of its edges masked (i.e. MASK = 1 [mask]).  73 Check that no object of type Line has any of its edges masked (i.e. MASK = 1 [mask]).  74 Check that no lope vaits in the graph of hierarchical relationships (e.g. no master object is slave of its own slave,).  75 Check that no lope cytists in the graph of hierarchical relationships (e.g. no master object is slave of its own slave,).  76 Check for any floating DEPCNT object (i.e. which does not share any edge with a Group 1 object) which is within an area DEPARE object, that VALDCO > DRVAL1 Remark: This check must only be applied if both DRVAL1 and DRVAL2 for the DEPARE object are encoded with explicit and different attribute values.  76 Check for any floating DEPCNT object (i.e. which does not share any edge with a Group 1 object) which is within an area DEPARE object, that VALDCO > DRVAL1 Remark: This check must only be applied if DRVAL1 Remark: This check must only be applied if DRVAL1 Remark: This check must only be applied if DRVAL1 Remark: This check for any floating DEPCNT object (i.e. which does not share any edge with a Group 1 object) which is within an area DRGARE obje			Logical conditionary	
CATLIT, EXCLIT, LITCHR, SIGPER or SIGGRP. Remark: This check must not be applied to LIGHTS objects with STATUS 4 [not in use]  66 Check for any SOUNDG having the value (1) or nothing for EXPSOU that any depth value is situated within a DEPARE or a DRGARE of the corresponding range. See new checks 1768 and 1769  67 Check that no object is duplicated (same class, same attribute description and same geometry).  68 Check off there is an update to an object without the corresponding text/graphic file.  69 Check that the Agency Code of feature objects is valid.  70  71 Check that no object of type Area (except for objects where all of the edges have USAG = 3) has all of its edges masked (i.e. USAG = 3 [exterior boundary truncated by the data limit or MASK = 1 [mask]). Check that no object of type Line has any of it's edges masked (i.e. MASK = 1 [mask]).  72 Check that no loop exists in the graph of hierarchical relationships (e.g. no master object is slave of its own slave,).  73 Check that no attribute value contains a leading or a trailing space and no attribute of type List contains any space.  74 Check for any floating DEPCNT object (i.e. which does not share any edge with a Group 1 object) which is within an area DEPARE object, that DRVAL2 VALDCO >DRVAL1 Remark: This check must only be applied if both DRVAL1 and DRVAL2 for the DEPARE object are encoded with explicit and different attribute values.  75 Check for any floating DEPCNT object (i.e. which does not share any edge with a Group 1 object) which is within an area DRGARE object, that VALDCO > DRVAL1 Remark: This check must only be applied if Doth DRVAL1 for the DRGARE object is encoded with an explicit value.  76 Check that no DEPCNT object (i.e. which does not share any edge with a Group 1 object) which is within an area DRGARE object, that VALDCO > DRVAL1 Remark: This check must only be applied if DRVAL1 for the DRGARE object is encoded with an explicit value.  77 Check that no DEPCNT object (beck of any great object of type Dreate.  78 Check for any		·		
Remark: This check must not be applied to LIGHTS objects with STATUS 4 [not in use]  66 Check for any SOUNDG having the value (1) or nothing for EXPSOU that any depth value is situated within a DEPARE or a DRGARE of the corresponding range. See new checks 1768 and 1769  67 Check that no object is duplicated (same class, same attribute description and same geometry).  68 Check if there is an update to an object without the corresponding text/graphic file.  69 Check that the Agency Code of feature objects is valid.  70 Check that no object of type Area (except for objects where all of the edges have USAG = 3) has all of its edges masked (i.e. USAG = 3 [exterior boundary truncated by the data limit] or MASK = 1 [mask]).  Check that no loop exists in the graph of hierarchical relationships (e.g. no master object is slave of its own slave,).  72 Check that no attribute value contains a leading or a trailing space and no attribute of type List contains any space.  74 Check for any floating DEPCNT object (i.e. which does not share any edge with a Group 1 object) which is within an area DEPARE object, that DRVAL2 >VALDCO >DRVAL1 Remark: This check must only be applied if both DRVAL1 and DRVAL2 for the DEPARE object are encoded with explicit and different attribute values.  75 Check for any floating DEPCNT object (i.e. which does not share any edge with a Group 1 object) which is within an area DEPARE object, that DRVAL2 >VALDCO >DRVAL1 Remark: This check must only be applied if DRVAL1 for the DEPARE object is encoded with a Group 1 object) which is within an area DRGARE object, that DRVAL2 object of the DRGARE object is encoded with a Group 1 object) which is within an area DRGARE object is encoded with a Group 1 object) which is within an area DRGARE object is encoded with any object which is within an area DRGARE object is encoded with any object which is within an area DRGARE object is encoded with any object which is within an area DRGARE object is encoded with any object which is within an area DRGARE object i				
objects with STATUS 4 [not in use]  66 Check for any SOUNDG having the value (1) or nothing for EXPSOU that any depth value is situated within a DEPARE or a DRGARE of the corresponding range. See new checks 1768 and 1769  67 Check that no object is duplicated (same class, same attribute description and same geometry).  68 Check if there is an update to an object without the corresponding text/graphic file.  69 Check that no object of type Area (except for objects where all of the edges have USAG = 3) has all of its edges masked (i.e. USAG = 3 (exterior boundary truncated by the data limit) or MASK = 1 (mask)).  Check that no object of type Line has any of it's edges masked (i.e. MASK = 1 (mask)).  Check that no loop exists in the graph of hierarchical relationships (e.g. no master object is slave of its own slave,).  73 Check that no attribute value contains a leading or a trailing space and no attribute of type List contains any space.  74 Check for any floating DEPCNT object (i.e. which does not share any edge with a Group 1 object) which is within an area DEPARE object, that DRVAL2 >VALDCO >DRVAL1 Remark: This check must only be applied if both DRVAL1 and DRVAL2 for the DEPARE object are encoded with explicit and different attribute values.  75 Check for any floating DEPCNT object (i.e. which does not share any edge with a Group 1 object) which is within an area DRGARE object, that VALDCO > DRVAL1. Remark: This check must only be applied if DRVAL1 for the DRGARE object is encoded with an explicit value.  76 Check that no DEPCNT object (i.e. which does not share any edge with a Group 1 object) which is within an area DRGARE object, that VALDCO > DRVAL1. Remark: This check must only be applied if DRVAL1 for the DRGARE object is encoded with an explicit value.  77 Check that no DEPCNT object (or she object of type Area.  78 Check that no DEPCNT object to she that no boundary crosses itself.  79 Check for any area object that no boundary crosses itself.				
66 Cheek for any SQUNDG having the value (1) or nothing for EXPSOU that any depth value is situated within a DEPARE or a DRGARE of the corresponding range. See new checks 1768 and 1769 67 Check that no object is duplicated (same class, same attribute description and same geometry). 68 Check if there is an update to an object without the corresponding text/graphic file. 69 Check that the Agency Code of feature objects is valid. 69 Check that no object of type Area (except for objects where all of the edges have USAG = 3) has all of its edges masked (i.e. USAG = 3 [exterior boundary truncated by the data limit] or MASK = 1 [mask]). 60 Check that no loop exists in the graph of hierarchical relationships (e.g. no master object is slave of its own slave,). 70 Check that no attribute value contains a leading or a trailing space and no attribute of type List contains any space.  71 Check for any floating DEPCNT object (i.e. which does not share any edge with a Group 1 object) which is within an area DEPARE object, that DRVAL2 >VALDCO >DRVAL1 Remark: This check must only be applied if both DRVAL1 and DRVAL2 for the DEPARE object (i.e. which does not share any edge with a Group 1 object) which is within an area DRGARE object, that DRPAL2 >ORDVAL1 for the DRGARE object, that VALDCO >DRVAL1 for the DRGARE object is encoded with an explicit value.  72 Check that no DEPCNT object (i.e. which does not share any edge with a Group 1 object) which is within an area DRGARE object is encoded with an explicit value.  73 Check that no DEPCNT object (i.e. which does not share any edge with a Group 1 object) which is within an area DRGARE object is encoded with an explicit value.  74 Check that no DEPCNT object (i.e. which does not share any edge with a Group 1 object) which is within an area DRGARE object is encoded with an explicit value.  75 Check that no DEPCNT object is within a FLODOC, HULKES, LNDARE or PONTON object of type Area.  76 Check for any area object that no boundary crosses itself.  77 Check for only line object				
for EXPSGU*that any depth value is eituated within a DEPARE or a DRGARE of the corresponding range. See new checks 1768 and 1769  67 Check that no object is duplicated (same class, same attribute description and same geometry).  68 Check if there is an update to an object without the corresponding text/graphic file.  69 Check that the Agency Code of feature objects is valid.  70 Check that no object of type Area (except for objects where all of the edges have USAG = 3) has all of its edges masked (i.e. USAG = 3 (exterior boundary truncated by the data limit] or MASK = 1 [mask]).  Check that no object of type Line has any of it's edges masked (i.e. MASK = 1 [mask]).  Check that no loop exists in the graph of hierarchical relationships (e.g. no master object is slave of its own slave,).  73 Check that no attribute value contains a leading or a trailing space and no attribute of type List contains any space.  74 Check for any floating DEPCNT object (i.e. which does not share any edge with a Group 1 object) which is within an area DEPARE object, that DRVAL2 or the DEPARE object are encoded with explicit and different attribute values.  75 Check for any floating DEPCNT object (i.e. which does not share any edge with a Group 1 object) which is within an area DRGARE object, that VALDCO > DRVAL1. Remark: This check must only be applied if DRVAL1 for the DRGARE object, that VALDCO > DRVAL1. Remark: This check must only be applied if DRVAL1 for the DRGARE object is encoded with an explicit value.  76 Check that no DEPCNT object is within a FLODOC, HULKES, LNDARE or PONTON object of type Area.  77 Check that no DEPCNT object trosses another DEPCNT object.  78 Check for any area object that no boundary crosses itself.  79 Check for any area object that no component edges of a line object cross without a connected node at the	66		Logical consistency	₩
DEPARE or a DRGARE of the corresponding range. 	Inland ECDIS		
1000	Check that the file extension is sequential until a new edition of the base set is issued.	Inland ENC Product Specification	E
1001	Check if DSID-UPDN is out of sequence.	Inland ENC Product Specification	E
1002	Check for proper usage of file extension, EDTN, UPDN, UADT and ISDT for re-issues of an ENC.	Inland ENC Product Specification	E
1003	Check that EDTN starts one higher than the previous edition number.	Inland ENC Product Specification	Е
1004	Check that the file names of a base set and the reissue are identical.	Inland ENC Product Specification	E
	See check 1797		
i1001	Check that all external files in an exchange set are referenced by a dataset in the same exchange set.	Inland ENC Product Specification	W

## 2.4 Checks relating to the Inland ENC Encoding Guide

	Inland ENC Encoding Guide		
		Appendix B.1- Annex A	
1500	Check that certain area objects do not overlap for logical reasons:  LNDARE and SBDARE.  LNDARE and CBLARE, achare, achbrt,	Logical consistency, IENC EG 4.8.14	W
	FAIRWY, TWRTPT, lokbsn, lkbspt.		
<del>1501</del>	Check that no M_HDAT objects exist.	<del>2.1.1</del>	E
1502			
1503	Check that no object has an attribute value for verdat without a value for at least one of ELEVAT, HEIGHT, VERCCL, VERCLRorVERCOP. Exceptions are m_vdat and m_sdat objects (subject to their own QA tests).	IENC EG C.1.4/C.1.5	W
1504	Check that the value in the Vertical Datum subfield (VDAT) of the Data Set Parameter field (DSPM) is not null.	Logical consistency	Е
1505	Check that there are no m_vdat objects which have an attribute value for verdat equal to that given in the Vertical Datum subfield (VDAT) of the Data Set Parameter field (DSPM).	IENC EG C.1.5	E
1506	Check that all Geo objects which have attribute values relative to a Height Datum and which cross a m_vdat object boundary are split at that boundary.	IENC EG C.1.5	Е
1507	Check that no m_vdat objects overlap one another.	IENC EG C.1.5	Е
1508	Check that no m_sdat objects overlap one another.	IENC EG C.1.4	Е
<del>1509</del>	Check that no VERDAT attribute exists for the objects DEPARE DEPCNT, DRGARE, OBSTRN, SOUNDG, UWTROC, or WRECKS.	2.1.3	E
1510	Check that the value in the Sounding Datum subfield (SDAT) of the Data Set Parameter field (DSPM) is not null.	Logical consistency	Е
1511	Check that there are no m_sdat objects, that have an attribute value for verdat equal to that given in the Sounding Datum subfield (SDAT) of the Data Set Parameter field (DSPM).	IENC EG C.1.4	E
1512	Check that all SOUNDG objects and all those objects that have at least one of VALSOU, VALDCO, WATLEV, watlev, DRVAL1 or DRVAL2 encoded with an explicit value and which cross a m_sdat object boundary are split at that boundary.	IENC EG C 1.4 / I 1.8	Е
1513			
<del>1514</del>	Check that no M_UNIT objects exist	<del>2.1.4</del>	<u> </u>
1515	Check that if an object contains a value for the attributes DATEND, DATSTA, PEREND, PERSTA, SORDAT, SUREND or SURSTA, that this value conforms to ISO 8601:1988.	IENC EG B.J	E
1516	Check that any Group 2 seasonal/periodic object (if the object class is concerned at once by the attributes STATUS, PERSTA and PEREND) with the attribute STATUS containing the value (5) [periodic/intermittent] also has the start and end of the active period encoded in PERSTA and PEREND, and vice versa.	IENC EG B.J	W

1517			
	Check that the value of the Producing agency subfield (AGEN) of the Data Set Identification field (DSID) is correct, and that it is the same as the first two characters of the data set file name.	IENC PS 6.3.2.1	E
<del>1519</del>	Check that no M_PROD objects exist.	<del>2.2.1</del>	E
			•

1520	Check that the value of the Edition Number (EDTN) subfield of the Data Set Identification field (DSID) is correct.	IENC PS 5.7	E
			_
	Check that the value of the Update Number (UPDN) subfield of the Data Set Identification field (DSID) is correct, and that it is equivalent to the extension of the data set file name, except in the case of a re-issue; in which case, it should be equal to the last update number.	IENC PS 5.7	E
1522	Check that the value of the Update application date (UADT) subfield of the Data Set Identification field (DSID) is correct for data sets with a file name extension of ".000", or that it is null in all other cases.	IENC PS 5.7	E
1523	Check that the value of the Issue date (ISDT) subfield of the Data Set Identification field (DSID) is correct, and that for data sets with a file name extension of ".000" it is greater than or equal to the value of the Update application date (UADT) subfield.	PS 5.7	E
1524	, , , , , , , , , , , , , , , , , , , ,		
1525			
1526			
<del>1527</del>	Check that any DRVAL2 attribute value for M_QUAL objects is greater than or equal to the maximum depth to which the CATZOC category for that M_QUAL object indicates.	<del>2.2.3.1</del>	E
<del>1528</del>	Check that if there is an attribute value for TECSOU for a given M_QUAL object, that only one sounding technique has been used within that M_QUAL object coverage.	<del>2.2.3.1</del>	E
1529	Check that no object falling within a given M_QUAL object coverage has an attribute value for TECSOU that is equivalent to an attribute value for TECSOU on the M_QUAL object.	IENC EG C.1.2/ C.1.6/ C.1.7 IENC PS 3.5.6	E For US/ RU
	Check that no object falling within a given M_QUAL object coverage has an attribute value for SOUACC that is equivalent to the SOUACC or CATZOC attributes for the M_QUAL object.	IENC EG C.1.2/ C.1.6/ C.1.7 IENC PS 3.5.6	E For US/ RU
1531	Check that no M_QUAL object has attribute values for POSACC, SOUACC, QUASOU or TECSOU which are equivalent to or degrade the accuracy indicated by the attribute value of CATZOC.	IENC EG C.1.2/ C.1.6/ C.1.7 IENC PS 3.5.6	E For US/ RU
1532	Check that if there is an attribute value for SURSTA for a given M_QUAL object that it relates to the oldest survey of two or more surveys for that M_QUAL object	IENC EG C.1.2	E For US/ RU

	coverage.

	a value for OBJNAM equivalent to the OBJNAM value of	IENC EG O.1, O.2, O.4, P.1	
	the master object.		
1725			
1726	Check that the entire area of the data set is covered by		Е
	one or more m_nsys objects, with a value for the attribute	IENC EG C.1.3	
	marsys indicating the buoyage system in operation.		
1727	Check that no m_nsys object overlaps any other m_nsys		Е
1121		IENC EG C.1.3	_
4700	object.	IENC EG C.1.3	
1728			
1729	Check for any geo object forming part of a navigational		W
	aid (buoy or beacon), that the combination of	IENC EG C.1.3	
	characteristics for structure, topmark and lights conforms		
	to CEVNI, Russian inland waterway regulatios or the		
	IALA system being used (given in marsys or MARSYS of		
	the geo object or, if not encoded, in marsys of the meta-		
	object m_nsys).		
	This check must not be applied to objects having a value		
	of (9) [no system] or (10) [other system] for the attribute		
	MARSYS, and to slave objects if the master object has a		
	value of (9) [no system] or (10) [other system] for the		
	attribute MARSYS.		
	Optional attributes may be either encoded or undefined.		
	Mandatory attributes must be encoded with explicit		
	values (i.e. not "unknown").

1780					
1781	Check that any BUISGL or LNDMRK object which is part of a master/slave relationship and references a LIGHTS object as slave, has a value of (33) [light support] for the				

October 2011

	attribute FUNCTN.					
1782						
1783	Check that no object of type Area with:  - WATLEV = 4 [covers and uncovers] overlaps a DEPARE or depare object with DRVAL1 >= 0.  - WATLEV = 5 [awash] overlaps a DEPARE or depare object with DRVAL1 > 0.	logical consistency	W			
1784	Check for any spatial object that no attribute HORDAT, POSACC, or QUAPOS is populated with a missing value (unknown).	logical consistency	W			
1785						
1786	Check that any objects of type Area with WATLEV = 2 [always dry] are covered by LNDARE objects of type Area.	logical consistency	W			
1787	Check for any objects NAVLNE and RECTRC sharing an edge that they have the same or reciprocal attribute value for ORIENT.	logical consistency	W			
1788						
1789	Check for any object NAVLNE and RECTRC of type Line with a value for ORIENT encoded, that the orientation of the spatial geometry is consistent (i.e. deviation less than 5 degrees) with the attribute value (or the reciprocal value) encoded in ORIENT.	Logical consistency	W			
1790	Check for any LIGHTS having ORIENT encoded with an explicit value, that:  • SECTR1 and SECTR2 are not populated, or  • it is not aggregated to a RECTRC or a NAVLNE in a collection object C_AGGR, or  • the structure object which is the master of this LIGHTS in a master/slave relationship is not aggregated to a RECTRC or a NAVLNE in a collection object C_AGGR.	Logical consistency	W			
1791	Check for any NAVLNE having CATNAV = 3 [leading line bearing a recommended track] that a RECTRC with CATTRK = 1 [based on a system of fixed marks] shares a part of the line geometry used for the NAVLNE, and vice versa.	Logical consistency	W			
1792	Check that no cell crosses the 180° meridian.	Encoding Bulletin EB18	W			
1793 1794	Check for any LIGHTS object having CATLIT = 1 [directional function] and which is a slave in a master/slave relationship, that the master object is not a BOYCAR, BOYLAT, BOYSAW or BOYSPP.	Logical consistency	W			
1795 1796	Check for any master object in a master/slave relationship containing temporal attribution (DATEND, DATSTA, PEREND, PERSTA) that its slave objects also contain the same temporal attributes.	Logical consistency	W			
	Chack that name of the following feeture chiest and seem	etric primitivo	1			
1797	Check that none of the following feature object and geom combinations, which do not display in inland ECDIS, are	present in the				
	October 2011		dition 1.0			

	dataset: - bridge of type point; - DAMCON of type point; - PIPSOL of type point; - ROADWY of type point; - TUNNEL of type point.		
i1550	For any DEPARE with QUASOU=2 (depth unknown). Check that DRVAL1=UNKNOWN if the DEPARE is bounded by a COALNE, whose edges have attribute QUAPOS=4	IENC EG I.1.9	W
i1551	For any DEPARE with QUASOU=2 (depth unknown). Check that DRVAL1=0 if the DEPARE is bounded by a COALNE, whose edges have attribute QUAPOS not equal 4	IENC EG I.1.9	W
i1552	For any DEPARE with QUASOU=8 (reported), Check that at least one of DRVAL1 or DRVAL2 are encoded.	Logical consistency	Е
i1553	Check that any <b>current</b> feature has populated at least one of the velocity attributes: <b>curvhw</b> , <b>curvlw</b> , <b>curvmw</b> , <b>curvow</b>	Logical consistency	W
i1554	Check that any <b>current</b> feature with geometric primitive = Area has a value for attribute direction of impact ( <b>dirimp</b> )	IENC EG H.1.1	W
i1555	Check that any <b>current</b> feature with geometric primitive = Point has a value for attribute ORIENT	IENC EG H.1.1	W
i1556	Check that if feature current has water level name attribute entered then the corresponding velocity attribute must also be encoded: hignam must have curvhw lownam must have curvlw meanam must have curvmw othnam must have curvow	IENC EG H.1.1	E

Edition 1.0 October 2011

## 2.5 Checks relating to allowable attribute values for particular object classes

2000	(enum	for any object that attributes of type "L" (list) and "E" erated) only contain allowable values listed in the ng table for the given object class.	W
	x-y-z *	allowable values (alone or in a list) all the pre-defined attribute values as listed in the IENC Feature Catalogue are allowed.	
	#	the attribute is mandatory, and the missing value (Unknown) is allowed.	
	(#)	the attribute is mandatory, but the missing value (Unknown) is prohibited (no logical sense).
